Index to Subjects—Volume 6, 1981

Acid phosphatase, *Saccharomyces rouxii*, 305
Acinetobacter spp., 155
Adhesion
  erythrocyte, *Bacteroides* spp., 7
  marine vibrio, starvation, 195
  streptococci group A, 101
Alcaligenes spp., heterotrophic nitrifier, 229
Alcohol dehydrogenase, aromatic, 333
Algae, allelopathic interactions, 275
Alkali, cation requirements, *Saccharomyces cerevisiae*, 295
Alkaline phosphatase, yeast, 121
Alkaline proteinase, thermophilic, *Streptomyces*, 17
Allelopathic interactions, 275
Alveolar macrophages, rat pulmonary, opsonic requirements, 315
Amikacin, liposomes, 373
Amino acid uptake, 221
Aminoglycosides, 373
α-Aminoisobutyric acid uptake, *Clostridium difficile*, 221
Anabaena cylindrica, diaminobenzidine oxidation, 201
Anacystis nidulans, cytochrome *c* oxidation, 233
Anaerobic respiration, *Campylobacter* spp., 349
Analysis, sequential principal components, 1
Anthranilate synthetase, 189
Antibiotic-associated colitis, 221
Antibiotics
  amikacin, liposomes, 373
  benzylpenicillin, 27
  gentamicin, liposomes, 373
  kanamycin, liposomes, 373
  mecillinam vs. *Myxococcus xanthus*, 167
  tobramycin, liposomes, 373
Antibodies, *Escherichia coli* O and K antigens, 55
Antigens, phosphatidylcholine liposomes containing, 61
Aromatic alcohol dehydrogenase, 333
Arrhenius plots, cytochrome *c* oxidation, 233
Arthrobacter crystallopoietes, growth, oxygen, cytochrome *d*, 253
Arthrobacter paraffineus, 145
Aspartate transcarbamoylase, *Yersinia* differentiation, 43
Aureobasidium pullulans, cytochrome of, 161

Bacillus cereus T spores, radiation activation, 151
Bacteria
  colonization potential in rhizosphere, 137
  dead, digestion of, 13
  endospores, cryptobiosis, 151
  Gram-negative, in bladder epithelium cytopathology, 37
  lumen in endomycorrhizal spores, 207
  methylotrophic, 367
  phytopathogenic, 1, 145, 269, 309, 377
  quinone specificity and electron transport, 155
  rickettsia-like, 309
  sulfate-reducing, 259
  surface components vs. host adhesion, 7
Bacterial denitrification, 247
Bacteriocin, 377
Bacteriophage ϕW-14, DNA, α-putrescinylthymine distribution, 185
Bacteriophage T4, receptor, *Escherichia coli* K12, 291
Bacteriophage typing, computer analysis in, 1
Bacteriophages of morphological group C3, 65
Bacteroides asaccharolyticus, 7
Bacteroides fragilis group, outer membrane proteins, 85
Bacteroides gingivalis, 7
Bacteroides melaninogenicus, subspecies *intermedius*, 7
Bacteroides spp., adhesion to erythrocytes, 7
Bacteroides spp., β-lactamases compared, 327
Barley, inoculum density vs. bacterial growth, 137
Beggiatoa alba, sulfur inclusions, 71, 75
Benzylpenicillin, as carbon and nitrogen source, 27
Benzylpenicilloic acid, 27
Biosurfactant production, phytopathogenic and soil bacteria, 145
Bladder epithelium, Gram-negative bacteria cytopathology, 37
Botrytis cinerea, germinated sclerotia, 243
Botulinum toxin, infant/adult potencies, 239
Bridging polymer, 195
2-Bromoethanesulfonate, isolation of *Methanosarcina* mutants, 321
Brucella abortus, lymphocyte response to phytohemagglutinin, 61
Buccal epithelial cells, *Bacteroides* spp., adhesion, 7

Campylobacter coli, 31
Campylobacter fetus, 31, 349
Campylobacter jejuni, 31, 349
Campylobacter spp., catalase-producing, differentiation, 31
Candida tropicalis, hexadecane uptake, 21
Candida utilis, alkaline phosphatase, 121
Canine monocytes, 373
Cell division inhibition, mecillinum, 167
Cell surface morphology, *Bacteroides* spp., 7
Cephalosporinase, 327
Chlamydomonas reinhardtii, polysaccharides, 281
Chlorpromazine, intestinal epithelium shedding, 263
Chorismate mutase, 189
Classification, computer analysis, 1
Clostridium botulinum, toxins, 127, 239
Clostridium difficile filtrates, HeLa membrane inhibition, 221
Cluster detection, bacteriophage typing, 1
Colonization, rhizosphere, 137
Colonization factors and *Escherichia coli*, 49
Coniferyl alcohol dehydrogenase, 333
Corynebacteria, phytopathogenic, biosurfactants, 145
Corynebacterium fascians, 145
Corynebacterium insidiosum, 145
Cristispira in a lamellibranch, *Cryptomya californica*, 355
Cryptobiosis, bacterial endospores, 151
Cryptomya californica Conrad, 355
Crystalline style, *Cristispira*, 355
Cyanide-insensitive respiration, 161
Cyanobacteria
  auxotrophs, isolation of, 189
  cytochrome *c* oxidation, 233
  diaminobenzidine oxidation, 201
Cysteine as serum growth-factor, 213
Cytochrome(s)
  Aureobasidium pullulans, 161
  concentration, growth, oxygen effect, 253
  cytochromes, aa_3 and *c*, *Anacystis*, 233
  cytochrome *d*, *Arthrobacter*, 253
  cytochrome oxidase, *Anacystis*, 233
Cytotoxicity, *Clostridium difficile* vs. HeLa cells, 221

DAHP synthase derepression, 189
Dead bacteria, digestion, 13
Dehydrogenase, aromatic alcohol, 333
Demethylmenaquinone, 155
Demulsification, 145
Denitrification, enzyme purification, 247
Dermatophytes, phospholipase A of, 171
Desulfovibrio vulgaris, oxygen tolerance, 259
Diaminobenzidine oxidation, *Anabaena cylindrica*, 201
Diarrhoea, inhibition of, 263
Diet, digestion of dead bacteria, 13
Differentiation, *Campylobacter*, 31
Digestion, dead bacteria, 13
Dilignols, 333
DNA
  bacteriophage ϕW-14, 185
  bacteriophages of morphological group C3, 65
  Legionella spp., plasmids, 377
  replication, *Schizosaccharomyces pombe*, 225
DNA-binding proteins, 139
DNA-protein interactions, 139
DNA synthesis
  Clostridium difficile, 221
  Saccharomyces cerevisiae, 175
Dormancy, bacterial endospores, 151
Drug-resistance elements, translocatable, 377
Dwarf forms, marine vibrio, starvation, 195

Ectomannosyltransferase in *Saccharomyces cerevisiae*, 361
Electron transport, bacterial, quinone specificity, 155
Emulsification, surfactant properties, 145
Endomycorrhizal spores, lumen bacteria, 207
Endospores, dormancy, 151
Enterobacter, in urinary infections, 37
Enterobacter sakazaki, bacteriophage, 65
Enterotoxin-associated serotypes, *Escherichia coli*, 49
Enterotoxin diarrhoea, chlorpromazine, intestinal epithelium shedding, 263
Enzyme cytochemistry, kinetics, 305
Enzyme purification
  coniferyl alcohol dehydrogenase, 333
  nitrous oxide reductase, 247
Epidermophyton floccosum, phospholipase A activity in, 171
Erwinia chrysanthemi, indigoidine production, genetics, 269
Erwinia herbicola, bacteriophage, 65
  insertion mutation, 377
Erythrocytes, adhesion of *Bacteroides* spp., 7
Escherichia coli
  bacteriophage, morphological group C3, 65
  bacteriophage T4 receptor, 291
  bladder epithelium cytopathology, 37
  drug-resistance element, 377
  enterotoxin-associated serotypes,
    colonization factors, 49
    immunity, intraperitoneal infection, mice, 55
    lipopolysaccharide, 61
    purine requirement, 337
Ethanol, increased yield by yeast, 111

Fatty acids
  cellular, *Campylobacter*, 31
  higher, esters, 145
  in L-forms, 301
Fish diseases, vibriosis, 343
β-Fructofuranosidase, yeast cells, 305
Fruiting bodies, *Myxococcus xanthus*, 95
Fumarate reductase, *Campylobacter*, 349
Fungal sclerotia, germination, 243
Fungus, polymorphic, 161
Fusarium sp., synergistic degradation of benzylpenicillin, 27

β-Galactosidase, 131
Genetics, *Erwinia chrysanthemi*, indigoidine production, 269
Gentamicin, liposomes, 373
β-Glucans, *Botrytis cinerea*, 243
Glutaraldehyde, yeast cell fixation, 305
Glycolipoprotein, 383
Glyoxylate production, methylotrophic bacteria, 367
Growth-stimulation, *Neisseria meningitidis*, 213

Haemophilus spp., 155
HeLa cells, *Clostridium difficile*, 221
Hemolysin production, iron, 287
Heterocysts, *Anabaena cylindrica*, diaminobenzidine oxidation, 201
Hexadecane uptake by *Candida tropicalis*, 21
Homoisocitrate, methylotrophs, 367
Homothallism, *Schizosaccharomyces pombe*, 225
Hydrocarbons, paraffinic, 145
Hydrogenase in anaerobe oxygen tolerance, 259

Immune response, *Escherichia coli*, intraperitoneal, mice, 55
Immunoglobulin, *Neisseria meningitidis*, 213
Inclusions, sulfur, *Beggiatoa*, 71, 75
Indigoidine, genetics, *Erwinia chrysanthemi*, 269
Indoleglycerolphosphate production, 189
Infant/adults toxicity, botulinum toxin, 239
Inoculum density vs. bacterial growth, 137
Insulin, oxidized B-chain, *Streptomyces* cleavage, 17
Intestinal mucosal epithelium, shedding, chlorpromazine in, 263
Iron
  acquisition, *Salmonella paratyphi* B, 217
  hemolysin production in *Listeria monocytogenes*, 287
  toxin of *Clostridium botulinum*, 127
Isocitric dehydrogenase, methylotrophs, 367

Kanamycin, liposomes, 373
Kinetics, enzyme cytochemistry, 305
Klebsiella planticola sp. nov., 105
Klebsiella spp., urinary tract infections, 37

β-Lactamases, *Bacteroides* compared, 327
Lactose, utilization, *Vibrio vulnificus*, 131
Lamellibranch, *Cryptomya californica*, 355
Legionella pneumophila, detection in environment, 89
Legionella spp., plasmid DNA, 389
Lethality in experimental infection, 383
L-forms, fatty acids, 301
Lipids, *Pseudomonas aeruginosa*, 383
Lipopolysaccharide
  Escherichia coli receptor, 291
  phosphatidylcholine liposome suppression, 61
Liposomes
  phosphatidylcholine, lipopolysaccharide, suppression, 61
  Staphylococcus aureus, 373
Lipoteichoic acid, adhesion of streptococci, 101
Listeria monocytogenes, iron and hemolysin production, 287
Lumen bacteria from endomycorrhizal spores, 207
Lymphocyte suppression, *Brucella abortus*, 61

Macrophages, alveolar, opsonic requirements, 315

Macrophages, bacterial activity, 315
Mannosyl transferases, *Saccharomyces cerevisiae*, 361
Marine pathogen, *Vibrio vulnificus*, 131
Marine vibrio, starvation-induced adhesion, 195
Mecillinam, cell division inhibition, *Myxococcus xanthus*, 167
Membrane, outer, *Bacteroides fragilis*, 85
Membrane functions, *Clostridium difficile*, 221
Menaquinone, 155
Meningococci, growth in human serum, 213
Methanobacterium formicicum, 321
Methanobacterium hungatei, 321
Methanobrevibacter ruminatium, 321
Methanosarcina, mutants, resistant, isolating agent, 321
Methylotrophic bacteria, glyoxylate generation, 367
Microsporum cookei, phospholipase A activity, 171
Morphology, cell surface, *Bacteroides* spp., 7
Mutation induction, 377
Mycorrhizal fungi, 207
Myxococcus xanthus, 95, 167

Neisseria meningitidis, human serum stimulation, 213
Nitrocellulose filters, binding assay system, 139
Nitrogen oxides, reduction, *Alcaligenes*, 229
Nitrogenase, oxygen protection, 201
Nitrosoguanidine mutagenesis, *Erwinia chrysanthemi*, 269
Nitrous oxide reductase, *Paracoccus denitrificans*, 247
Nocardia amarae, 145
Nuclei, *Saccharomyces cerevisiae*, isolation and characterization, 175
Nutrient deficiency, adhesion, marine vibrio, 195

Opsonization, 315
Ordered distribution, α-putrescinylthymine, 185
Oxidases, terminal, in *Aureobasidium pullulans*, 161
Oxygen lability, denitrifying bacteria, 247
Oxygen protection, 201, 253
Oxygen tolerance, *Desulfovibrio vulgaris*, 259

Paracoccus denitrificans, 247
P/d mating system, *Schizosaccharomyces pombe*, 225
PATAg reactive material in *Chlamydomonas* polysaccharides, 281
Phagocytic cells, alveolar macrophages, 315
Phony disease of peach, 309
Phosphatase, acid, 305
Phosphate transport, 115
Phosphatidylcholine liposomes vs. mitogen phytohemagglutinin, 61
Phospholipase A activity in dermatophytes, 171
Photosystem 1, 233
Phytohemagglutinin, lymphocyte response, 61
Plant pathogens, bacterial
  biosurfactant production, 145
  phage typing, 1
  phony disease of peach and plum leaf scald, 309
  pigment, genetics, 269
Plasma membrane, *Saccharomyces cerevisiae*, 111, 361
Plasmid-induced auxotrophy, 337
Plasmid profiles, *Legionella* spp., 389
Plasmid R46 in *Escherichia coli*, purine requirement, 337
Plasmids, group N, 337
Plum leaf scald, 309
Polymers, bridging, 195
Polysaccharides
  Botrytis cinerea, 243
  Chlamydomonas, 281
  streptococci, 101
Potassium requirements, *Saccharomyces cerevisiae*, 295
Principal components analysis, sequential, 1
Protective antibody, *Pseudomonas aeruginosa*, 383
Protein binding, *Neisseria*, 213
Protein synthesis, 221
Proteinase, alkaline, *Streptomyces*, 17
Proteins, outer membrane, *Bacteroides*, 85
Proteus mirabilis
  fatty acids in L-forms, 301
  quinone specificity, 155
Proteus spp.
  bacteriophage, 65
  urinary tract infections, 37
Pseudomonas aeruginosa
  lethality, 383
  phosphate transport, 115
Pseudomonas AM1, 367
Pseudomonas fluorescens, 155
Pseudomonas MA, 367
Pseudomonas spp.
  phage typing, principal components analysis, 1
  synergistic degradation of benzylpenicillin, 27
  urinary tract infections, 37

Purine auxotrophy, 337
α-Putrescinylthymine in bacteriophage ϕW-14 DNA, 185

Quinone specificity, 155

Radiation, spore respiration activation, 151
Rat
  bladder epithelium cytophatology, Gram-negative bacteria, 37
  germ-free, dead bacteria digestion, 13
Receptor for bacteriophage T4 in *Escherichia coli*, 291
Renographin gradients, thiobacilli, differentiation, 81
Respiration, anaerobic, *Campylobacter* spp., 349
Rhizosphere, bacterial colonization, 137
Rhodococcus erythropolis, coniferyl alcohol dehydrogenase, 333
Rickettsia-like bacteria, phony disease of peach and plum leaf scald, 309
RNA
  Clostridium difficile, 221
  Myxococcus xanthus, 95
  Saccharomyces cerevisiae, 175
Rubidium effects and toxicity, *Saccharomyces cerevisiae*, 295

Saccharomyces cerevisiae
  mannosyl transferases, 361
  nuclei, isolation and characterization, 175
  potassium requirements, 295
Saccharomyces rouxii, acid phosphatase, 305
Salmonella abortus equi, lipopolysaccharides, 61
Salmonella newport, bacteriophage, 65
Salmonella paratyphi B, iron acquisition, 217
Schizosaccharomyces pombe, sex interconversion, 225
Sclerotia, fungal, germination, 243
Serratia marcescens, lipopolysaccharides, 61
Serratia spp., bacteriophage, 65
Sequential principal components analysis, bacteriophage typing, 1
Serine biosynthesis and regulation, 189
Serine pathway, 367
Serum, human, *Neisseria meningitidis* stimulation, 213
Sodium, toxicity, *Saccharomyces cerevisiae*, 295
Spirochetes, 355
Spores, *Bacillus cereus* T, radiation activation of respiration, 151
Staphylococcus aureus, adhesion, 101
Staphylococcus aureus, liposome, intraphagocytic killing of, 373

Starch deposits, analysis, *Chlamydomonas reinhardtii*, 281
Streptococci, adhesion, 101
Streptococcus faecalis, fatty acid composition, in L-forms, 301
Streptomyces rectus var. *proteolyticus*, 17
Streptomyces sp., thermophilic, alkaline proteinase, 17
Succinate, in yeast fermentation, 111
Sulfate-reducing bacteria, oxygen tolerance, 259
Sulfur inclusions, *Beggiatoa*, 71, 75
Superoxide dismutase, oxygen tolerance in anaerobes, 259
Surfactants, 145
Survival strategy, adhesion in starvation, 195
Symbiotic associations, 207
Synergistic degradation–syntrophism, 27
Syntrophism, 27

Taxonomy
bacteriophages, morphological group C3, 65
Campylobacter, 348
Klebsiella planticola sp. nov., 105
numerical, bacteriophage typing, 1
Vibrio ordalii sp. nov., 343
Vibrio vulnificus, 181
Yersinia, aspartate transcarbamoylase, 43
Thiéry technique, starch deposit analysis, 281
Thiobacilli, acidophilic, differentiation, 81
Tobramycin, liposomes, 373
Toxin, *Clostridium botulinum*, iron, 127
Transferrin
Neisseria meningitidis, 213
Salmonella paratyphi B, iron uptake, 217
Transposon Tn5, 377
Trichophyton mentagrophytes, phospholipase A activity, 171
Tryptophan, biosynthesis and regulation, 189
Tryptophan-analog resistance, 189

Ubiquinone, 155
Ultrastructure, *Cristispira*, 355

Vibrio ordalii sp. nov., 343
Vibrio vulnificus
lactose-positive, isolates, relatedness, 181
lactose utilization, 131
Vibrio, marine, adhesion, 195
Vibriosis, fish, 343
Virulence factors, *Pseudomonas aeruginosa*, 383

Wax, plant surfaces, 145

Xanthomonas spp., phage typing, principal components analysis, 1
Xylem-limited bacteria, phony disease of peach and plum leaf scald, 309

Yeast
fission, *Schizosaccharomyces pombe*, 225
glutaraldehyde-fixation, 305
growth, *Saccharomyces cerevisiae*, 295
respiratory-deficient, succinate, 111
vacuolar alkaline phosphatase, 121
Yeast-like fungus, 161
Yersinia enterocolitica, 43
Yersinia spp., differentiation, aspartate transcarbamoylase, 43
